

Profile- and tooling upgrade

**Existing tooling – new geometry**

**Short time-to-market with low investment costs**

# PROFILE- AND TOOLING UPGRADE

Profile wall thicknesses that are too thick, functional restrictions or necessary design changes can be rectified by making specific adjustments to the extrusion tooling. We adapt the tooling quickly and precisely to optimally align your profiles with current market, design and quality requirements. Thanks to the storage of your tooling data, we manufacture new parts and make modifications that take your requirements and market developments into account. Rely on our expertise to reduce costs, optimize your production and improve the design - without compromising on quality!

## Your benefits at a glance

- Short time-to-market for design changes
- Low investment costs
- Material savings through profile optimization
- Product extensions such as adding inner webs
- Complete tooling service possible
- FEM calculation on request
- Integration of FLOW.CONTROL and FLOW.MATIC after technical testing
